BASIC-ABSTRACT:

Burnt dielectric material consists of (in mole %) CaO 14.1-39.2, SiO<sub>2</sub> 14.1-39.2, PbO 0.3-10.8, and TiO<sub>2</sub> (pref. anatase) 23.0 - 71.4. Alternatively the material is produced from (in mole %): CaSiO<sub>3</sub> 16.5-64.5, PbO 0.5-12.5 and TiO<sub>2</sub> 35-82. The material has a high dielectric constant with a high positive temp. coefficient, the dielectric is small.
